

TAL Bar Code ActiveX and DLLs

- **Bar code ActiveX Control**
- **16 + 32-bit bar code DLLs**

Add high-resolution bar codes to any Windows application — royalty free!

No Other Bar Code Programming Tool Can Compare with TAL's Features and Quality

TAL Bar Code ActiveX Control and DLLs create the highest-quality bar codes possible in Windows. No other bar code programming tool comes close.

The TAL Bar Code ActiveX Controls and DLLs produce high-resolution Windows Metafile (vector) graphics that are completely device independent, fully scalable and can print to the highest resolution of any Windows-supported printer. No advance knowledge of the printer resolution is required to produce extremely precise graphics that display and print lightening fast, while requiring only minimal system resources.

TAL Bar Code ActiveX Control and Bar Code DLLs provide complete and precise control over all bar code dimensions, including narrow bar width, bar height, narrow to wide bar ratio and magnification factors. Bar width reduction and gain are also fully supported for producing prepress output.

Check digits and start/stop codes are automatically added to your bar codes and all possible features of each bar code symbology are supported, including Supplementals, Bearer Bars, Quiet Zones and human readable messages above or below a symbol (additional comment lines are also supported).

The TAL Bar Code ActiveX control also supports data binding — making it the perfect tool for database reporting and labeling applications.

TAL Bar Code Products

- Create exceptionally high-quality, high-precision bar codes based on Windows metafile graphics (WMF) technology — not based on low-quality font or bitmap technology.
- Print perfect bar codes from any application to the highest resolution of any printer.

- Extremely easy to use and includes many programming examples and a free bar code tutorial.
- All bar codes are 100 percent to specification and therefore are always readable. Check digits and all start/stop patterns are also generated and added automatically.
- Free sample code is provided for most application development environments, including VB, C/C++, Excel, Access, Word and Internet Explorer HTML.
- Bar codes can be rotated in 90-degree increments.
- ActiveX Control supports data binding for database applications.
- Supports full font selection for human readable text and comment text above or below bar codes.
- Supports bar width reduction or gain for producing film masters.
- Select from 16 million colors for bar codes, human readable text and background, including transparent.

TAL Bar Code DLLs

The TAL Bar Code DLLs are designed to be used by professional programmers developing sophisticated applications that require low-level control over all aspects of bar code production. In addition to all the features already listed, the DLLs can output bar code graphics in any of the following four ways:

- Output to Memory Metafiles.
 - Output bar codes to the clipboard as Metafiles (WMF).
 - Save bar codes to disk as Metafiles (WMF).
- Draw the bar code directly to a Windows Device Context (hDC).

TAL Bar Code ActiveX Control

The TAL Bar Code ActiveX Control is ideal for most typical bar code applications, including database, packaging design, document tracking, postal bar coding and general labeling applications.

The ActiveX Control is an extremely easy and powerful tool that works flawlessly with any Windows program that supports ActiveX technology, including Visual Basic, C++, Internet Explorer, Microsoft Word, Excel and Access.

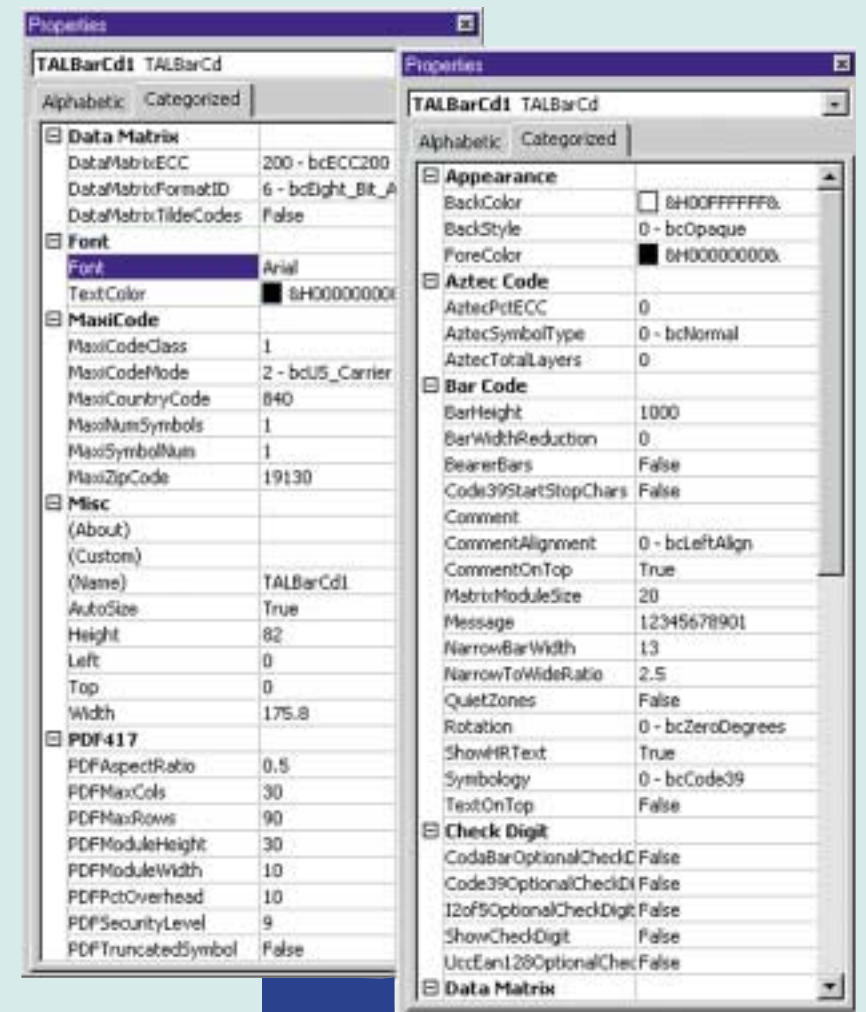

Simply insert the TAL Bar Code ActiveX Control into your application or web page, specify a few properties in the properties window (shown right), and your desired bar codes will be generated automatically. Little or no programming is required to obtain professional quality bar codes.

The TAL Bar Code ActiveX Control also supports data binding so you can bind fields in a database to the control and generate bar codes for each data record in a database. The data binding capabilities make it incredibly easy to produce reports and labels containing bar codes using any database that supports ActiveX technology, including Microsoft Access or Visual Basic.

Both the ActiveX Controls and the DLLs can be distributed *royalty-free* to up to 10,000 licenses.

If you plan to distribute the TAL Bar Code ActiveX Control with your application, you'll be happy to know the total uncompressed size of all the files you'll need to distribute is less than 500Kb. The compressed size is typically less than 200Kb. In fact, only four small files need to be installed to provide complete support for all of the different types of bar codes available in the TAL Bar Code ActiveX Control.

Because the TAL Bar Code ActiveX Control was developed using the Microsoft Active Template Library (ATL), there are no additional run time dependencies, such as MFC Class Libraries or Visual Basic Runtime files.

“Once you install the package, you're ready to go. You can use snippets from the sample code directly within your application and distribute your app royalty free. I printed bar codes on a 600 DPI laser and they look fantastic... TAL has the market on this one.”

Visual Basic Programmers Journal*

“Unlike other products which create bitmaps or use fonts to produce a bar code symbol, TAL's Bar Code ActiveX produces high-resolution Windows metafile (vector) graphics, which are completely device-independent, fully scalable, and print to the highest resolution of any printer.”
